

2019 OA Hackathon

The 2019 OA Hackathon will focus on enabling Arrowmen to integrate problem solving and technology to meet the 21st century requirements of the Order of the Arrow.

Who: Every Arrowman

What: 2019 OA Hackathon with Novice, Intermediate, and Advanced Tracks

When: June 26th-30th, 2019

Where: University of Illinois at Urbana-Champaign

Why: To focus and enable arrowmen to integrate problem solving and technology to meet the 21st century requirements of the Order of the Arrow

Novice

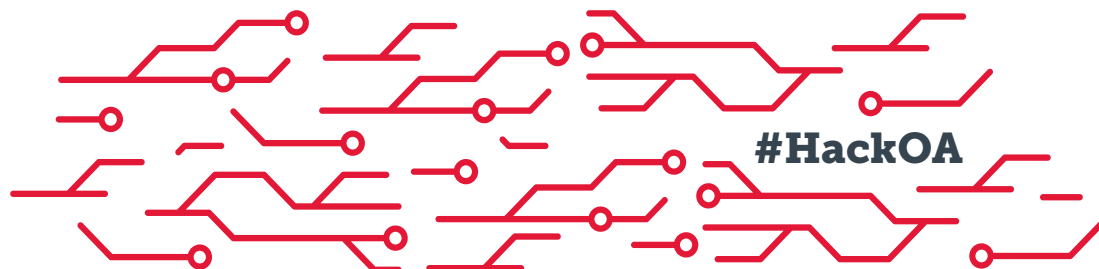

"Novice" delegates will focus on experiences and learning new skills, both in technical and in leadership aspects. They will compete in an innovative display and have the opportunity to earn merit badges and possible requirements for Supernova awards. No experience necessary!

Intermediate

"Intermediate" delegates will spend half of the program gaining similar technical and leadership skills and then will compete against each other in a typical hackathon. They will be given 24 hours to solve a problem through technological efforts to mitigate a real-world issue within our Order. These Arrowmen should have some exposure to computer programming before arrival.

Advanced

"Advanced" delegates will have the option to work together in teams made up of Arrowmen with varying technical knowledge to brainstorm and develop solutions to prompts. This will be the more typical hackathon program, spending most of the program creating these solutions. Arrowmen in this track should know how to code in multiple programming languages.
